Abstract (en)

[origin: WO2022073583A1] A device is operable as one of a plurality of edge devices of a computer network, wherein the computer network comprises the plurality of edge devices and one or more intermediary nodes, wherein the one or more intermediary nodes are configured to communicatively couple the edge devices to each other is disclosed. The device is configured to control one or more tunnels and corresponding one or more data rates that use one or more paths between the device and a destination edge device among the plurality of edge devices.
