Abstract (en)

[origin: WO2022053208A1] The invention relates to a method for safely guiding a motor vehicle in an at least partly automated manner and with support from an infrastructure. During the at least partly automated guidance of the motor vehicle with support from an infrastructure, a check is carried out to determine whether a functionality which should be achieved by the infrastructure is still being provided, wherein at least one action is carried out on the basis of the result of the check in order to safely guide the motor vehicle in a partly automated manner with support from the infrastructure. The invention relates to a device, a computer program, and a machine-readable storage medium.
