Abstract (en)
A laundry treating appliance (10) for treating laundry according to an automatic cycle of operation includes a cabinet (12) defining an interior, a treating chamber (18) located within the interior, and a condenser assembly (160). The condenser assembly (150) includes a condenser (32) fluidly coupled to the treating chamber (18) to receive moisture-laden air from the treating chamber (18) and condense it into a liquid condensate. A condensate container (160) has an inlet (164) fluidly coupled to the condenser (32) to receive the condensate. A housing (200) removably holds the condensate container (160) and forms a condensate overflow path (225). The housing (200) has spacers (210) to form a gap (206) between at least a portion of the housing (200) and the condensate container (160).
