Abstract (en)

[origin: WO2022058320A1] The present invention concerns an aerosol generation device (10) designed to operate according to several operation modes and comprising: - a housing (12) extending along a device axis (X); - a measurement circuitry (28) configured to generate, while the device (10) is handheld by a user, bioimpedance measurements relative to the user's body bioimpedance; - a control circuitry (30) comprises a control module (43) configured to extract control features from the bioimpedance measurements, compare the control features with reference features and basing on this comparison, authenticate the user.
