Abstract (en)  
[origin: WO2022058431A1] A bearing bushing for movably connecting a generator-side component to a foundation-side component of a wind turbine, comprising an elastomer body (6) with a cavity, surrounded by the elastomer material, for axially receiving a generator-side or foundation-side bearing pin (34), and a wall thickness (22), which is defined by an inner side of the hollow elastomer body (6) and its outer side, decreases at least in some portions in the axial direction of the elastomer body (6).
