Abstract (en)  
A liquid flow diverter (100) for a downpipe (200) and a method (300) for retrofitting the liquid flow diverter (100) with the downpipe (200) is disclosed. The liquid flow diverter (100) includes a body (110) with a first end (114) and a second end (116). A liquid outlet (120) is adapted to be coupled with the first end (114) of the body (110). The liquid outlet (120) allows fluid coupling of the liquid flow diverter (100) with the downpipe (200). The liquid flow diverter (100) is characterized in that the liquid outlet (120) is slidably coupled with the first end (114) of the body (110), such that the liquid outlet (120) is slideable relative to the first end (114) of the body (110) between a first position (P1) and a second position (P2). The liquid outlet (120) is adapted to be fluidly de-coupled with the first end (114) of the body (110) in the first position (P1). Further, the liquid outlet (120) is adapted to be fluidly coupled with the first end (114) of the body (110) in the second position (P2).
