Abstract (en)

The application provides a lighting lamp and a light source system thereof. The light source system includes a first reflector and a second reflector, the first reflector is nested in the second reflector, the first reflector is provided with a first light outlet, the first light outlet is located in the second reflector, the second reflector is provided with a second light outlet; the light source system further includes a first luminous body, the first luminous body is provided in the first reflector, the first reflector includes a first reflection surface, and in an optical axis direction, an orthographic projection of the first reflection surface covers an orthographic projection of the first luminous body; and/or, the light source system further includes a second luminous body, the second luminous body is provided in the second reflector, the second reflector includes a second reflection surface, and in an optical axis direction, an orthographic projection of the second reflection surface covers an orthographic projection of the second luminous body; light emitted by the first luminous body and the second luminous body is reflected by at least one of the first reflector and the second reflector and then exits from the second light outlet.
