Abstract (en)  
[origin: EP4215830A1] A method for selecting a second ventilation device (20) is a method for selecting a second ventilation device (20) in newly installing, in an indoor space (SI) where an existing first ventilation device (10) is placed, another ventilation device as the second ventilation device (20). The existing first ventilation device (10) has a first amount of ventilation as an amount of ventilation per hour. A first step includes calculating a second amount of ventilation, based on a size of the indoor space. The second amount of ventilation is an amount of ventilation per hour to be required as a measure against pathogenic infection. A second step includes calculating a difference between the second amount of ventilation and the first amount of ventilation, as an additional amount of ventilation. A third step includes selecting a ventilation device that enables ventilation corresponding to the additional amount of ventilation, as the second ventilation device (20).
