Abstract (en)

[origin: EP4216224A1] A technical improvement that solves or alleviates at least some of problems of the related art is provided. An information processing system according to the present disclosure is an information processing system including a first information processing apparatus, in which the first information processing apparatus includes a first display processing unit that displays a first screen including a plurality of objects related to a user's physical condition on a predetermined display unit, a selection information reception unit that receives selection information regarding at least one object selected by the user from among the plurality of objects displayed by the first display processing unit, a reporting destination determination unit that determines a reporting destination which is a target to which physical condition information including the selection information received by the selection information reception unit and time information regarding the time when the selection information is received is transmitted, and a transmission unit that transmits the physical condition information to the reporting destination determined by the reporting destination determination unit.
