Abstract (en)
An electric power converter includes: an electric power conversion unit that converts electric power that has been input, and outputs the converted electric power; and a control unit that controls an electric power conversion characteristic of the electric power conversion unit, based on a reference function; the reference function includes plural droop functions that have been defined according to input values, have drooping characteristics different from one another, and have been connected to each other; and the control unit controls the electric power conversion characteristic by control schemes that are different from one another and are according to the drooping characteristics of the droop functions.
