Abstract (en)
[origin: WO2022063822A1] The present invention relates to a ventilator device (10) for at least supporting artificial ventilation of patients, comprising:
• - a device housing (12), • - a functional arrangement (34) received in the device housing (12), the functional arrangement (34) comprising, as functional units, at least one portion of a breathing gas line (38, 60), a pressure-changing device (36) for changing a breathing gas pressure in the breathing gas line (38, 60), and a control device (28) for controlling the operation of at least one pressure-changing device (36), and - an input/output device (18), which is arranged on the device housing (12), is accessible from outside the device housing (12) in order to be operated, and is intended for inputting data and/or control commands at the control device (28) and/or for outputting data and information, the input/output device (18) being connected to the control device (28) for signal transmission. In accordance with the invention, the ventilator device (10) has a frame (42), the device housing (12) with the input/output device (18) arranged thereon being received on the frame (42) so as to be rotatable about a virtual rotation axis (D).
