Abstract (en)
[origin: WO2022063552A1] The invention relates to a sawblade (100) with a plurality of wave-shaped teeth (Z1,Z2) which are formed on a continuous base section (102) of the sawblade (100). Each of the teeth (Z1,Z2) has a paired tooth base (140, 142) with a tooth base upper face (150, 152) and a hard metal blade (114, 116) arranged thereon. Each tooth base (140, 142) adjoins the hard metal blade (114, 116) arranged thereon in a flush manner on both sides along a longitudinal axis (120) of the base section (102), and each hard metal blade (114, 116) and each tooth base upper face (150, 152) has two bevels and/or convexly rounded areas extending substantially along the longitudinal axis (120) of the base section (102), wherein the teeth (Z1,Z2) are designed to be set and/or unset.
