Abstract (en)
[origin: CA3196743A1] An installation device having power-engineering or building-services modules (16) and a method therefor are described. The installation device (10) comprises at least two side walls (12) and a removable front cover (14), which surround a plurality of stackable modules (16). The side walls (12) have a frame (26), two longitudinal rails (36) disposed therein and a transverse rail (44). For the servicing of a module (16'), the longitudinal rails (36) are disposed along the corners of the modules (16) remaining in the device, in order to secure the one or more modules (16) located above the module (16') to be serviced. The two frames (26) are disposed along two longitudinal rails (36) on the front side and can be connected, by means of cable pulls (42) mounted on the upper frame segment (30), to the transverse rails (44), on which the module (16') to be serviced lies, so that the module to be serviced can be removed from the installation device (10) after the one or more modules (16) located above the module (16') to be serviced are secured on the longitudinal rails (36).
