Abstract (en)  
[origin: WO2022069171A1] The invention relates to a spring holder having an elastically deformable latching arrangement and an elastically deformable clamping arrangement; wherein the spring holder is able to be latchingly coupled to a workpiece carrier via the latching arrangement; and the clamping arrangement has an elastically deformable clamping tab, via which, in a clamping position, a retaining force is able to be exerted on a workpiece via a clamping region when the spring holder is coupled to the workpiece carrier, such that the workpiece is able to be frictionally coupled to the spring holder via a clamping face bearing on the clamping region and thus is able to be removably fixed to the workpiece carrier.
