Abstract (en)  
[origin: WO2022070178A1] An air convection system configured for use in building structure having a suspended ceiling dividing the building structure to an upper plenum in airflow communication with an HVAC unit, and a lower area, said air convection system comprising; an air convection module having a plenum opening configured to face said plenum, a lower area opening configured to face said lower area; a controllable airflow facilitating unit configured to selectively facilitate airflow at least from said plenum opening to said lower area opening; and a control system configured to receive an operational signal indicative of at least one operational parameter of said HVAC unit, and operate said airflow facilitating unit in accordance with said operational signal.
