Abstract (en)

[origin: WO2022069564A1] The subject matter of the invention relates to a method for generating, from a set (15) of database(s) (20), a structured database of data (10) associated with a task, the method comprising the following steps: - acquiring (110) a list of one or more required actions and a group of one or more data extraction rules, each comprising an extraction law, - generating (120) a structure of the structured database (10) comprising at least one unsuccessful query class, - sending (140) the extraction law of the extraction rule(s) to the set (15) and receiving an extracted datum or extracted data from the set (15), - storing (160) the or each received extracted datum in a class of the structured database (10), and - for each sent extraction law, if no extracted datum is received in response from the set (15), associating (170) the law with the unsuccessful query class.
