Abstract (en)

[origin: WO2022069825A1] The invention relates to a method for configuring a user apparatus (UE1), intended to be implemented by this user apparatus and comprising a step of deactivating, for at least one encrypted communication of this user apparatus with a remote device (S1) via a network (CN), at least one encryption procedure selected by the user apparatus and implemented with a first entity (FF) of the network involved in routing data exchanged between the user apparatus and the remote device during the encrypted communication, this data being subject to at least one other encryption procedure separate from the at least one deactivated encryption procedure.
