Abstract (en)

[origin: WO2022069673A1] The invention relates to a lighting module of a motor vehicle signalling device, comprising a ceramic substrate comprising opposite first and second faces, and a plurality of selectively activatable light sources mounted on the first face of the ceramic substrate, each of the first and second faces of the ceramic substrate being provided with at least a first, respectively a second, interconnection layer, characterized in that the ceramic substrate comprises a plurality of through holes designed to interconnect the first interconnection layer to the second interconnection layer.
