Abstract (en)

An electrified door or window system (20) has a frame (12) with a power transmitting device (14) and a door or window having a power receiving device (16). The power receiving device (16) is electrically connected to the power transmitting device (14) in the frame of the door or window (12). At least one powered device (22, 24, 26, 28) is integrated in the door or window. At least one electrically conductive pathway (18) extends from the power receiving device (16) to the at least one powered device (22, 24, 26, 28). A controller (30) is provided to control the flow of power from the power receiving device (16) to the at least one electrically conductive pathway (18).
