Abstract (en)

[origin: WO2022074419A1] The present invention relates to a chewable food product containing one or more components that undergo thermal degradation even at temperatures above 70°C and up to 120°C, in combination with one or more natural elastomers. The invention is also directed to a method for preparing a foodstuff comprising a natural elastomer, said method comprises forming a composition containing a natural elastomer that has been kneaded at a temperature of at least 140°C for a period of at least 30 minutes, and subjecting said composition to mixing.
