Abstract (en)
[origin: WO2022079745A1] This invention consists of a mobile device that allows users with motor difficulties to easily, gradually and independently change their posture from sitting to standing, with the option of stopping in any intermediate condition, to maintain the acquired position with bi-podal load as well as to move around indoors, independently and without any assistance, by using the joystick steering control, moving in an upright position, or in any that is deemed to be the most suitable for one's needs.
