Abstract (en)

[origin: WO2022073601A1] The invention relates to a skin-cleansing pad comprising a fibrous substrate treated with a skin-cleansing lotion. The skin-cleansing lotion includes a surfactant or surfactant mixture comprising at least one surfactant having an HLB (hydrophilic-hydrophobic balance) value of at least 6.5 and not more than 16, preferably 7 to 12, and at least one oil. The skin-cleansing pad has a low water content of less than 12 wt.-%. Upon contact with water, the skin-cleansing lotion forms an emulsion effective in removing a wide range of makeup types from the skin, including those with greater amounts of hydrophobic (oily) components.
