Abstract (en)

[origin: WO2022073786A1] The invention relates to a bending machine (300) for producing complexly bent bending parts from straight wire rods (DS), said bending machine comprising: a computer numerical control unit (190); a transport system (310) for transporting successive wire rods along a transport path (312), the transport system having a plurality of workpiece receiving devices (325) each for receiving a single wire rod; and a plurality of work stations positioned along the transport path (312), at least two of the work stations being designed as bending stations (320-1, 320-2, 320-3). The bending machine is characterised in that at least one bending station (320-2) comprises a bending unit (340-1) configured as a rotary draw bending unit.
