Abstract (en)
[origin: WO2022073702A1] The proposed solution relates in particular to a method for adjusting an adjustable part (2) provided at a bodywork opening (O), which is closable by at least one vehicle door (1A, 1B), on a vehicle (V), wherein a power-operated adjustment of the adjustable part (2) is controlled using at least one sensor device (3) via which a person (P) in the surroundings of the bodywork opening (O) can be detected and via which a power-operated adjustment of the adjustable part (2) can be activated, in order to make it easier for a person (P) to board or alight from the vehicle (V) when the vehicle door (1A, 1B) is open.
