Abstract (en)  
[origin: WO2022073045A1] The invention relates to a device for fastening a finishing strip (9) with a holder (1) forming a wall leg (3), said holder comprising a receiving web (8) which protrudes upwardly and is arranged offset transversely to the wall leg (3) as well as engages into a downwardly open receiving groove (10) of the finishing strip (9) for the clamping accommodation of the finishing strip (9), and further comprising a resilient locking tongue (11) which is bent out of the receiving web (8) and latches into a latching recess (18) of the finishing strip (9). In order to provide advantageous fastening conditions, it is proposed that the locking tongue (11) forms a clamping web (14), which originates from the free longitudinal edge (13) of the receiving web (8) and is bent out towards the wall leg (3), and an adjoining latching web (15) which is bent back against the receiving web (8) and which latches into the latching recess (18) of the finishing strip (9).
