Abstract (en)  
[origin: WO2023274460A1] The invention relates to a device for fastening to a component, comprising a base body (1) and a compensation element (2), the compensation element (2) being connected to the base body (1) via a thread (14), and wherein the compensation element (2) has a passage (4) with a driving device (5) for a screw. The device according to the invention is characterized in that the driving device (5) is connected to the compensation element (2) in a form-fitting manner.
