Abstract (en)
[origin: WO2022075927A1] The invention relates to an oven control method comprising the process steps of measurement of a current temperature (Ta) of the inner chamber (8) during the cooking operation by a temperature sensor (26) disposed in the muffle (10), and generating a door open signal in the open position of the door (7) when the control unit (20) detects that the current temperature (tç) falls below the minimum temperature (Tmin) during a current cycle time (Ta) shorter than the previous recorded cycle time (tö) that is read from an associated memory module in a signal transmission manner.
