Abstract (en)
[origin: WO2022073708A1] The invention relates to a fire detector control panel for connecting a detector line having a plurality of detectors connected to the detector line. For the installation and/or commissioning of the detectors, the fire detector control panel can be operated in an installation mode. In the installation mode, the fire detector control panel is connected, for communication, to a mobile communication terminal of a user (e.g. commissioning technician). If an installation error is detected, the fire detector control panel sends the mobile communication terminal a corresponding error notification for output at an output device (e.g. display, audio) of the mobile communication terminal, and/or, if an installation error is detected, the fire detector control panel sends the corresponding detector (i.e. the detector affected by the installation error) a corresponding error notification for output at an output device (e.g. display, audio, LED). One or more monitoring units for checking the electrical properties of the detector line are installed in the fire detector control panel and/or in the respective detectors.
