Abstract (en)

[origin: WO2022078638A1] The present invention discloses an improved RF interface board and a laminated assembly having a RF interface board having an inner and an outer part, comprising a dielectric support having a first and a second surfaces and at least a first and a second RF transmission strips disposed on the dielectric support; the first and the second RF transmission strips are electrically isolated from each other; the first and the second RF transmission strips are configured to be connected to a connector at the outer part and are each configured to be connected to a different conductive element at the inner part; the first RF transmission strip is on the first surface. The present invention discloses the associated method and use.
