Abstract (en)

The present invention concerns an aerosol delivering system (10) for an aerosol generating device, the aerosol delivering system comprising a reservoir (31) storing a liquid vaporizable material, and a porous element (32) arranged in fluid communication with the reservoir (31) and designed to be in contact with a heater (25);the porous element (32) defining a contact surface (41) designed to be in contact with the liquid vaporizable material and a vaporizing surface (43) designed to release aerosol formed upon heating the liquid vaporizable material by the heater (25);wherein the vaporizing surface (43) is coated with a hydrophobic material forming a liquid barrier.
