Abstract (en)
A building materials group is described, comprising two building beams and at least a multi-layer building panel, which has: a first and a second coupling region, in which, when the multi-layer building panel is arranged with the first and the second coupling portion coupled and resting, respectively, on the first and the second building beam, it distributes thereon, respectively, a first and a second horizontal component, opposite one another, of the weight thereof in order to prevent the panel from displacing towards the longitudinal axis, respectively, of the first and the second building beam.
