Abstract (en)

Fully autonomous refrigerated containers, which includes a gascooled magnetic refrigeration system (3), powered by a set of electrical batteries (4) integrated into the structure of the container, which are powered by two independent energy generation systems, a system based on wind turbines (6), and a piezoelectric generator system operated using vibrations and/or aerodynamics. The invention foresees a reduction in thermal loss by including magnetic seals in its access doors by way of a paramagnetic rubber perimeter lining profile (8).
