Abstract (en)  
[origin: WO2022079234A1] The invention relates to a smoking article (1) comprising a cylindrical shape (2) with a longitudinal axis (L) running through respective base areas (2a, 2b) of a distal end (1a) and a mouth end (1b) of the smoking article (1), wherein the smoking article (1) comprises the following segments (3), which are arranged subsequently in the following order from the distal to the mouth end (1a, 1b), and are at least in part wrapped in a circumferential wrapper (4): a. A tobacco segment (5) comprising tobacco or tobacco derived smokable material, b. A cooling segment (6) having a first flow path (8) from the tobacco segment (6) to a filter segment (9), c. the filter segment (9) comprising a second flow path (10) from the cooling segment (6) to the mouth end (1b). The invention is characterized in that the filter segment (9) comprises a tobacco product (11) comprising tobacco particles having an average particle size of 30 µm and a dispersion medium for dispersing the tobacco particles. The invention also comprises a method for manufacturing such a smoking article.
