Abstract (en)

[origin: WO2022078832A1] The invention relates to an aerosol generation device, in particular an aerosol generation device comprising a cover with one or more flexible regions that can be deformed when pressed. In a first aspect the invention is an aerosol generation device that comprises a main body defined by a main housing comprising an operation interface portion that is provided at least a portion of the exterior surface of the main housing and that can be actuated for operating the aerosol generation device, and a cover element that is detachably attached or connected to the main housing. At least a portion of the operation interface portion is arranged between the exterior surface of the main housing and the cover element, and the cover element comprises one or more flexible regions that can be elastically deformed for actuating the operation interface portion.
