Abstract (en)
[origin: WO2022077088A1] A soft-side container is sized to fit inside larger luggage such as a suitcase. It has a peripheral zipper that aids in compressing the contents of the container when it is loaded, such as with clothing, thereby tending to take less space in the suitcase. It also has a suspension system permitting the container to be hung from a hanger rod, or from another container of the same type, in a cascade of shelves. To aid in this function, the container has an expanding side wall, and also a form-preserving spreader that tends to cause the container to hold itself in a generally planar configuration to function more effectively as a shelf.
