Abstract (en)

[origin: WO2022081204A1] The present invention is related to methods of stabilizing an ophthalmic drug by adding a surfactant and a viscosity enhancer to the ophthalmic drug to create a composition wherein the composition has a viscosity of about 25 centipoise or less at a shear rate of 1/1000 per second at 25 degrees Celsius and a viscosity of about 70 centipoise or more at shear rate of 1 per second at 25 degrees Celsius, filling the composition into a container; and storing the container at a temperature from about 2 degrees Celsius to about 25 degrees Celsius, The present invention is further directed to a container prepared by the methods of the present invention.
