Abstract (en)

[origin: WO2022083986A1] The invention relates to an arrangement (10) for detecting (260) an activation action and for communicating in a vehicle (1), in particular designed for integration in the vehicle (1), comprising: - a communication unit (100) for repeatedly emitting (160) an electrical communication signal (20) via a transmission link (110) in order to provide the communication; - a sensor array (200) for detecting the activation action; - a coupling unit (300) electrically connected to the transmission link (110); - an electronic processing device (210) of the sensor array (200), said processing device (210) being electrically connected to the coupling unit (300) in order to detect, via the coupling unit (300), the emission (160) of the communication signal (20).
