Abstract (en)
[origin: WO2022084203A1] The invention relates to a packaging item (1) comprising a box (2) having a bottom (3), the packaging item (1) further comprising retention means (6) comprising an elastically deformable skin (8) for holding at least one object (O) against the bottom (3) of the box (2), characterised in that the elastically deformable skin (8) has a central elastic region (9) and a peripheral elastic region (10) around the central elastic region (9), the central elastic region (9) having an elasticity less than the peripheral elastic region (10), and in that the elastically deformable skin (8) also comprises at least one tertiary elastic region (11) extending the central elastic region (8) towards an edge of the elastically deformable skin (8) while being bordered by the peripheral elastic region (10), the tertiary elastic region (11) having an elasticity less than or equal to the elasticity of the central elastic region (9).
