Abstract (en)
[origin: WO2022084833A1] There is provided a method in a first Integrated Access Backhaul (IAB) node in a chain of connected IAB nodes for enabling simultaneous transmissions at an IAB node to upstream IAB nodes and downstream nodes. The method comprises: receiving a message from a second IAB node, the message comprising an indication for determining a timing for data transmission or reception; in response to the receipt of the message, determining the timing in accordance with the indication; and performing one of a transmission and a reception based on the determined timing.
