Abstract (en)

[origin: WO2022078683A1] The invention relates to a connection element (1) for electrically connecting a circuit carrier (25) to another circuit carrier (20). The connection element (1) has at least one solder connection (7, 8, 28, 29) for soldering onto the surface of the circuit carrier (25) and a connection pin, which is electrically connected to the solder connection (7, 8, 28, 29), for inserting into the other circuit carrier (20). According to the invention, the connection element (1) has a holding body (2), in particular a plastic body (2), and a contact element (3, 4, 16, 26, 34) which is connected to the holding body (2) and which is designed to be elastic. The contact element (3, 4, 16, 26, 34) has an end section, said solder connection being formed on the end section. The connection element (1) has a locking element which is connected to the connection element (1) in a movable manner back and forth between a locking position and a release position. The locking element is designed to limit the displacement of the contact element (3, 4, 16, 26, 34) in the locking position and release an elastic movement of the contact element (3, 4, 16, 26, 34) in the release position.
