Abstract (en)
A tent according to an embodiment of the present invention may be provided with: a plurality of support frames that form an assembled tent frame when the tent has been assembled; a tent fabric which is supported by the tent frame and surrounds the inner space of the tent frame; ridge frames that extend from the top portion of the tent frame in a direction parallel to the ground or an upwardly inclined direction with respect to the ground; pieces of awning fabric which are supported by the ridge frames, installed in an overhanging shape at the top portion of the tent frame, and form awning spaces with the tent frame; and connection strings of which, in the awning spaces, one end is coupled to the lower surface of each piece of awning fabric and the other end is coupled to the outer surface of the tent fabric so as to stretch out the tent fabric upward.
