Abstract (en)
[origin: US2023224691A1] A method for terminal configuration, a terminal device, and a network device are provided in the disclosure. The method for terminal configuration includes the following. The network device receives at least two sets of communication capabilities reported by a terminal device in an initial access procedure of the terminal device. The network device receives capability indication information transmitted by the terminal device, where the capability indication information indicates the network device to perform terminal configuration according to a first set of communication capabilities among the at least two sets of communication capabilities. The network device performs the terminal configuration according to the first set of communication capabilities.
