Abstract (en)

[origin: WO2022117840A2] The invention relates to a covering membrane (10) for medical wound area treatment, in particular for burns or for preventing adhesion. The covering membrane (10) has a substrate layer (12) comprising a polymer material as well as collagen particles (14) which have a particle size l of more than 80 μm and are disposed in such a way as to be fixedly embedded in at least some portions of the polymer material of the substrate layer (12). The invention further relates to a process for manufacturing such a covering membrane (10).
