Abstract (en)

[origin: WO2022082238A1] The invention relates to a drive device (1) for a movable furniture part (2), in particular for a furniture hatch, having a support (4) which can be fastened to a furniture carcass (3), an actuation arm device (5) which is mounted movably on the support (4) and can be connected to the movable furniture part (2), an energy store (6) with which a force can be applied to the actuation arm device (5), a damping device (7) with which a closing movement (S) and an opening movement (O) of the actuation arm device (5) can be damped, and an adjusting device (8) with which the damping device (7) can be adjusted in terms of a damping force, a damping start position (D) in relation to an angle position of the actuation arm device (5) relative to the support (4), and/or in terms of a damping travel, wherein the adjusting device (8) comprises at least one adjusting means (8a), which is coupled to the damping device (7) such that an adjustment of the damping force, damping start position (D) and/or damping travel carried out by the adjusting device (8) takes effect both when the actuation arm device (5) is damped during the closing movement (S) and when the actuation arm device (5) is damped during the opening movement (O) by means of the damping device (7).
