Abstract (en)

[origin: WO2022090615A1] A display apparatus comprises:- at least one backlight unit to project first deflected light to a first angular range, and to project second deflected light to a second different angular range, and - a spatial modulator array to form first modulated light from the first deflected light, and to form second modulated light from the second deflected light, wherein the apparatus is arranged to form the first deflected light by guiding and deflecting light obtained from one or more first light sources, wherein the apparatus is arranged to form the second deflected light by guiding and deflecting light obtained from one or more second light sources.
