Abstract (en)  
A burner assembly for a boiler for steam generation extends along a longitudinal axis (A) and comprises:• an air duct (40) centered along the axis (A), in which, in use, air flows in a forward direction (D); the air duct (40) being provided with an outlet (50) discharging into a combustion chamber (3) of the boiler unit (1);• a plurality of fuel conduits (90; 90a, 90b, 90c) into which, in use, at least one fuel flows in the forward direction (D);• a plurality of fuel injection nozzles (91) arranged around the air duct (40); each fuel injection nozzle (91) being connected to an end portion (93) of a respective fuel conduit (90; 90a, 90b, 90c) for discharging, in use, fuel into the combustion chamber (3) ;• the outlet (50) of the air duct (40) being arranged downstream of the fuel injection nozzles (91) along the forward direction (D);• the end portion (93) of at least one fuel conduit (90; 90a, 90b, 90c) being rotatable about its own extension axis (B).
