Abstract (en)
[origin: WO2022089711A1] Described is a nozzle (100) for a vacuum cleaner comprising a housing (110) and a suction space (120) formed within the housing. A sealing (130) member is provided on the outside of the suction space. The sealing member comprises, on the same side of the suction space, a first sweep line closer to the suction space and a second sweep line distanced from the first sweep line and further away from the suction space than the first sweep line. The first sweep line and the second sweep line being essentially parallel to each other, wherein at least one of the first sweep line and the second sweep line comprises projections extending towards the surface to be cleaned with openings between the projections.
