Abstract (en)

[origin: WO2022089791A1] A system, comprising at least one device (1) and at least one computing device (6), wherein the at least one device comprises a mirror (12) which reflects incident light from a user (P) facing a front surface of the mirror (12) to present a reflected image (PR) of the user (P) and which transmits incident light from a rear surface of the mirror (12), at least one display and at least one image unit (5.1-5.3) for determining a position of the user (P). The at least one computing device (6) is included in or coupled to the at least one device (1) and comprises at least one processor and a memory including instructions which, when executed by the at least one processor, cause the at least one processor to determine, based on image data from the at least one image capturing unit (5.1-5.4), the position of the user (P) in front of the device (1), and to define at least one of an appearance, a size and a position of at least one visual element (7.1, 7.2, 7.31-7.33; 7.41, 7.42; 7.5- 7.9; 7.8*) for display at the at least one display (11) depending on the determined position of the user (P).
