Abstract (en)

[origin: CA3190341A1] Communication assembly (1) for preventing interference resulting from oxygen flow noise, comprising: a) a breathing mask (10) comprising: a member (14) having a face shell (11) having a breathing cavity (12), a regulator (16) which supplies a breathing gas, b) a microphone (22) which is configured to acquire a sound signal in the breathing cavity, c) a test button (8) for supplying the breathing cavity with breathing gas, d) an attenuation device (34); e) a sound monitoring system (25), f) a controller (32) which is configured to operate the attenuation device in: an active mode when a flow noise through the breathing cavity (12) during inhalation by the user is detected, and an inactive mode when a vocal sound or a flow noise in the breathing cavity (12) in a stowed configuration is detected; and g) a transmitter (38) for transmitting an output signal (58).
