Abstract (en)
[origin: WO2022090307A1] The invention relates to a closing body (10) for closing and opening an access opening or a passage of a room, there being a pressure difference between the interior and the exterior of the room. The invention also relates to a closing fitting set (60) and a door leaf (12), by means of which closing fitting set and door leaf a closing body can be formed. The closing body (10) is in the form of a pivotable door (11), a pivotable window or a pivotable flap. A valve device (28) is provided on the closing body (10), which valve device effects a temporary pressure equalization during the opening or closing of the closing body (10). The valve device (28) is in the form of a valve flap (32), and a release mechanism (42) is provided, which opens the valve device (28). A locking fitting (18) is provided for the closing body (10), and the release mechanism (42) is coupled, for actuation, to the locking fitting (18) of the closing body (10).
